

I'm concerned that the FCC is listening to commercial manufacturers rather than science when it comes to BPL. This is a hazard to the RF spectrum and it isn't needed. In an article in the Wall Street Journal, it was discovered that during the .COM years, there was more dark fiber installed in the ground than can be used at this point in time. And since that dark fiber exists and can be used, BPL isn't needed at all. Use science to figure this out and put data in something that doesn't radiate. I am against BPL and the FCC should be held accountable for doing something that will harm Amateur Radio.
